

The Contractual Networks of Digital Commons

Self-organized criticality through individual autonomy

by Angelos Kornilakis

DESCRIPTION:

The work deals with Digital Commons. These are a case of the new organizational forms developed in the realm of digital economy and fall under the notion of "Network Enterprise", substituting the classical hierarchical forms of firms with horizontal cooperation between independent agents.

They are hybrid forms of organization, which reject both markets and hierarchies, as the two mainstream organizational modes of conventional economics. They are based on individual autonomy combined with egalitarian cooperative mechanisms, trying to reap the best of the organizational structure of firms without sacrificing individual autonomy.
